

UZP Enzymatic Treatment

Premium industrial strength universal enzyme product, trillions not billions of beneficial bacteria, enzymes & nutrients per pound, super concentrated formula is multiple times stronger than competing products. The gold standard of enzymatic treatments look for the gold bag.

Motor Homes & Boats

Mix 85 grams (3 oz.) of product into 0.5 liters (2 cups) of warm water, pour into toilet and flush or pour the mixture directly into the holding tank. Fill the balance of the tank with water and let it stand for two days. Drain tank and flush with water to clean the tank. When toilet is used again add 2 Tbsp. (30 grams) of product in 250 ml's (1 cup) of water to toilet and flush. This should be sufficient for control of odors. If odors reoccur before dumping, add an additional 2 Tbsp. (30 grams) of product to 250 ml's (1 cup) of warm water to the tank.

Boat Bilges

The product works equally effective in both salt and fresh water. Apply 15 grams (1 Tbsp.) of product for every 3.8 liters (1 gallon) of bilge water. If treatment is working the water will change to a milky color, if the water does not change color apply more product. Larger amounts of oil, grease and other contaminants will require more product to be effective. For larger bilges and commercial boating please contact your local representative for more information on details for the application and suitable application rates.

Avoid using bleach or other chemicals that can kill the bacteria and enzymes. Always use warm water to mix the product before applying it.
